Glossary of Services

Botox & Xeomin

A muscle relaxing agent that reduces wrinkles and fine lines by temporarily relaxing specific muscles. The most common areas of treatment are frown lines, the forehead, crow's feet, and lines between the eyes.

Dysport

A muscle relaxing agent that reduces wrinkles and fine lines by temporarily paralyzing specific muscles. Dysport is dispensed differently than Botox.

Juvaderm / Restylane

Dermal fillers made of hyaluronic acid— a naturally occurring substance in your skin that helps to add volume and hydration. Instantly restores your skin's volume and smooths away facial wrinkles and folds, like your "smile lines" (nasolabial folds— the creases that run from the bottom of your nose to the corners of your mouth).

Restylane Silk

Dermal hyaluronic acid filler designed to fill lips and smooth lines around the mouth.

Restylane Lyft

Hyaluronic acid soft tissue filler made specifically for cheek augmentation.

Belotero

An injected dermal filler that softens lines and wrinkles around the nose and mouth for immediate smooth and natural results. Product lasts six month or more in many patients, although outcomes may vary.

Vibraderm

Microdermabrasion is an innovative procedure to improve the skin's appearance. A non-crystal alternative to microdermabrasion, Vibraderm stimulates collagen production and exfoliates all areas of the face, neck, and body.

IPL / Photofacial

Diminishes fine lines, pore size, redness, broken capillaries, sun damage, and pigmentation problems. Treatment targets pigment below the skin surface to reverse signs of aging and sun damage without requiring downtime of laser resurfacing. Photofacial Therapy also reduces redness caused by rosacea.

Latisse

A product to grow eyelashes, making them longer, thicker, and darker.

Laser Hair Reduction

A quick, noninvasive way to permanently reduce unwanted hair. It can be performed in virtually all areas of the body where dark hair grows and is used by both men and women.

Chemical Peel

A customized chemical exfoliation that dissolves dead skin cells off the epidermis revealing fresh, new, bright skin. Chemical exfoliation helps to improve the appearance of photodamage, post-inflammatory hyperpigmentation, pore size, fine lines, and wrinkles. Regular chemical peels can dramatically improve problematic skin.

Dermaplaning

A simple, safe procedure for evenly exfoliating the epidermis and ridding the skin of fine vellus hair (peach fuzz). The result is a more refined, smooth, glowing appearance and is a great treatment to have prior to a big event. This procedure can be combined with a chemical peel allowing for deeper penetration.

Microneedling / PRP

Stimulates natural collagen production while allowing fine channels to be created in the skin to increase topical nutrient absorption. This allows for treatment delivery deep into the skin's fibroblasts to feed the cells found in the dermis and basal layer. This treatment is perfectly paired with stem cell therapy (PRP).

Biocellulose Restorative Masque

A replenishing treatment for compromised skin. This post procedure skin care treatment is a perfect add-on after a laser treatment or a chemical peel. It creates a protective barrier that occludes and helps facilitate cooling and soothing.

ResurFX Fractional

Skin resurfacing procedure used to reduce signs of aging and improve skin texture, laxity, and tone. Also used for scar and stretch mark reduction.

Photofractional

Combines IPL and ResurFX technology to target sun-induced skin damage and addresses tone, texture, and laxity.
