Glossary of Services

Botox & Dysport

A muscle relaxing agent that reduces wrinkles and fine lines by temporarily relaxing specific muscles. The most common areas of treatment are frown lines of the forehead, crow's feet, and lines between the eyes.

Juvaderm / Restylane

Dermal fillers made of hyaluronic acid – a naturally occurring substance in your skin that helps to add volume and hydration. Instantly restores your skin's volume and smooths away facial wrinkles and folds, like your "smile lines" (nasolabial folds – the creases that run from the bottom of your nose to the corners of your mouth).

Latisse

A product to grow eyelashes, making them longer, thicker, and darker.

Laser Skin Resurfacing (non ablative)

A skin tightening treatment that promotes the production of collagen and elastin. This treatment diminishes the appearance of fine lines, wrinkles, sagging skin, acne, or surgical scars, stretch marks, and melasma.

Photofacial

Diminishes fine lines, pore size, redness, broken capillaries, sun damage, and pigmentation problems. Treatment targets pigment below the skin surface to reverse signs of aging and sun damage without requiring downtime of laser resurfacing. Photofacial Therapy also reduces redness caused by rosacea.

Laser Hair Removal

A quick, noninvasive way to permanently reduce unwanted hair. It can be performed on virtually all areas of the body where dark hair grows and is used by both men and women.

Chemical Peel

A customized chemical exfoliation that dissolves dead skin cells off the epidermis revealing fresh, new, bright skin. Chemical exfoliation helps to improve the appearance of photodamage, post-inflammatory hyperpigmentation, pore size, fine lines, and wrinkles. Regular chemical peels can dramatically improve problematic skin.

Cryo Treatment

Anti-inflammatory, antibacterial freezing procedure that calms problematic or acneic skin. This cooling treatment reduces the appearance of fine lines, wrinkles, hyperpigmentation, laxity, dullness, and imperfections.

Dermaplaning

A simple, safe procedure for evenly exfoliating the epidermis and ridding the skin of fine vellus hair (peach fuzz). The result is a more refined, smooth, glowing appearance and is a great treatment to have prior to a big event. This procedure can be combined with a chemical peel allowing for deeper penetration.

Microneedling

Stimulates natural collagen production while allowing fine channels to be created in the skin to increase topical nutrient absorption. This allows for treatment delivery deep into the skin's fibroblasts to feed the cells found in the dermis and basal layer. This treatment is perfectly paired with stem cell therapy (PRP).
